ILYA SHARAFEEV

Full-Stack TypeScript Developer — Node.js / NestJS · Vue / Nuxt · React / Next.js

ilyasharafeev01@gmail.com | +380 68 031 0159 | Telegram | LinkedIn | github.com/IlyaSharafeev
Nessebar, Bulgaria (EET) — **fully remote, full-time** | Full overlap with the Ukrainian working day | UA native, RU fluent, EN **B1** (written, async)

SUMMARY

Full-stack developer with **almost 5 years** of commercial experience in **TypeScript**; for the last two years full-stack at every job — **NestJS** on the server, Vue / Nuxt, React / Next.js and Angular on the client. Now I own both sides of a live German auto parts e-commerce: the **NestJS API** (catalogue and search, cart and orders, auth, **PayPal**) and the Nuxt 4 storefront. At a fintech e-money platform I built KYC / KYB onboarding end to end — a NestJS service for the forms, server-side PDF and 2FA, plus the Angular apps. At Gelios, a new EdTech product, I wrote the **whole backend** from zero — PostgreSQL, MongoDB, Redis, JWT roles, **Stripe + PayPal**, WebSockets, Docker and CI/CD.

TECHNICAL SKILLS

Backend	**Node.js**, **NestJS** — commercial backends in e-commerce, fintech and EdTech; REST, GraphQL, **WebSockets**, DTO / service layers, server-side PDF, zod validation; Express, Nitro server routes
Databases	**PostgreSQL**, MySQL, MS SQL Server, **MongoDB**, **Redis** (cache, pub/sub); schema migrations
Frontend	**TypeScript strict** — generics, discriminated unions, typed API contracts; **React 16–18**, **Next.js** (App Router, SSR / SSG), TanStack Query, Zustand, Redux Toolkit
Integrations	**Stripe**, **PayPal** checkout, OAuth (Google, Apple), third-party APIs with rate limits (429 + Retry-After) and caching
Auth & security	**JWT** auth with role-based access, rotating refresh tokens with reuse detection, **2FA** (authenticator, SMS, passkeys), Google / Apple sign-in, rate limiting, security headers, CORS / CSRF
Infra	**Docker** & docker-compose, GitHub Actions, GitLab CI, **AWS** (S3, Lambda, CloudFront), Firebase, Vercel, Nginx basics
Quality	Vitest + msw, Playwright + axe-core, Cypress, Jest; tests written first before risky upgrades; dependency audits
Also	Vue 3, Nuxt 3 & 4, Pinia · Angular 20–21 · Ionic + Capacitor (mobile)

EXPERIENCE

ORAP GmbH — Full-Stack Developer — Apr 2026 — Present · Remote

*Two live storefronts of a German auto parts group — **orap.de** (B2B / wholesale) and **handlerparts.com** — NestJS API behind Nuxt SSR, multi-locale.*

- Own orap.de's frontend almost end to end — **243 of 256 commits, 228 components**: catalogue, cart, bulk article search, customer dashboard, **PayPal checkout**, several languages; **Lighthouse performance 95** on desktop.
- Built the **auth layer**: email confirmation, password recovery, route guards, cookie-stored tokens with a **rotating refresh token** — concurrent near-expiry requests coalesced into a single refresh.
- **Main API on NestJS**: catalogue and search (analogues, tyres, bulk article search), cart and orders with order changes and delivery addresses, login with refresh tokens and password recovery, **PayPal payments** and payment statuses; plus the Nitro server layer (token refresh, VAT check, caching, sitemap).
- Led the **Nuxt 3 → 4 upgrade on the live shop** behind tests written first (**190 unit tests** on Vitest today); found and fixed a silent bug that dropped every meta tag, added a regression test.

Stack: NestJS, Node.js, TypeScript, REST, PayPal · Nuxt 3 & 4, Vue 3, Pinia, Nitro, Tailwind CSS, zod, Vitest, msw, Playwright, axe-core

ICGS — Full-Stack Developer (Angular / NestJS) — Apr 2026 — Oct 2026 · Remote

*B2B e-money and payments platform (fintech, EMI): client onboarding, user profile and public investment pages — **NestJS** service and **Angular 20–21** apps.*

- Built the **KYC / KYB onboarding** for companies and individuals — two Angular apps with multi-step forms, conditional fields, cross-field validation, file uploads and a generated PDF of the application; **569 unit tests** (Karma / Jasmine) on the KYB app.

- **NestJS service** behind the onboarding: KYC / KYB form API (step saving, field validation), **server-side PDF** of the application, sign-in and **2FA** on the backend (codes, SMS, passkeys, Google / Apple linking), database schema and migrations.
- User profile app: **2-Step Verification** (authenticator, SMS, passkeys), confirmation codes for sensitive actions, session-expiry warning and proactive token refresh; Angular signals, unit tests on Vitest.

Stack: NestJS, Node.js, PostgreSQL, MS SQL Server · Angular 20–21, TypeScript, RxJS, Signals, Angular Material, Tailwind CSS 4, Karma / Jasmine, Vitest
Reference: letter from the Managing Director available on request

Gelios — Founding Full-Stack Engineer

Jan 2025 — Apr 2026 · Remote

New EdTech product built from zero: student portal, teacher portal and an internal CRM — I wrote the whole backend and laid the frontend.

- **Wrote the entire backend on NestJS** (Node.js, TypeScript): the REST and GraphQL API for all three apps on **PostgreSQL**, MySQL and **MongoDB** with **Redis**; registration and login with **JWT** and role-based access for students, teachers and admins.
- **Payments**: Stripe and PayPal checkout with webhooks that update invoice and payment statuses in the CRM.
- **Real-time and files**: WebSocket server for chat and notifications; resumable chunked file uploads end to end; Docker images and the CI/CD pipeline on GitHub Actions to the server.
- **Frontend**: Turborepo monorepo for three **Next.js** apps with shared typed API clients and a Storybook library from Figma; CRM with 1 000+ row tables and component-level RBAC, kept fast with virtualisation and React Query caching.

Stack: NestJS, Node.js, TypeScript, PostgreSQL, MySQL, MongoDB, Redis, REST, GraphQL, WebSockets, Stripe, PayPal, Docker, GitHub Actions · React, Next.js, Turborepo, TanStack Query, Storybook, Cypress

Own projects

2026

- **Kaufo** — full-stack C2C marketplace with **escrow** payments, TypeScript end to end: Vue 3 + Pinia frontend; **NestJS + Prisma + PostgreSQL** backend with an escrow-provider abstraction, real-time chat and price offers over WebSockets (Redis pub/sub across instances), passwordless login with **refresh-token rotation and reuse detection**, rate limiting, S3 photo storage, GDPR export / delete; Playwright e2e in CI.
- **Scout** — Chrome Web Store extension (Manifest V3): downloads and unpacks ~200 MB zstd files in an offscreen document, own binary-format parser, works within a third-party API's rate limit (**429 + Retry-After**) with caching; small server on **Vercel + Redis**.

Onix-Systems — Frontend Engineer

Dec 2022 — Jan 2025

Outsourcing: client projects in FinTech, e-commerce and SaaS on React / Next.js and Vue / Nuxt.

- Full **JavaScript → TypeScript migration** with strict typing for API contracts on live products; wrote the coding standards the team followed.
- Phased **Vue 2 → Vue 3 migration** of a monolith with no feature freeze; built an **SSR platform on Nuxt** from scratch with caching and code splitting.
- Front end of **Clubhouse**, a US online fitness and coaching platform: charts, i18n, real-time on Socket.io, Stripe payments, Node.js backend.

Stack: React, Next.js, Redux, TypeScript, Vue 3, Nuxt, Pinia, React Query, Tailwind CSS, Ionic, Capacitor, Docker, Jest, GitLab

Egolist — Frontend Developer

Jan 2022 — Dec 2022

- High-traffic marketplace: listings, seller dashboard and messaging; a low-latency **WebSocket layer for 10 000+ concurrent connections**; built the **GitLab CI/CD pipeline** — manual releases → one-click.

EDUCATION

M.Sc. in Computer Science — Oles Honchar Dnipro National University, Dnipro, Ukraine · 2024 — 2025

LANGUAGES

Ukrainian — native | Russian — fluent | English — B1 (technical documentation, written communication)
