Nessebar, Bulgaria (EET) — **fully remote, full-time** | Full overlap with the Ukrainian working day | UA native, RU fluent, EN **B1** (written, async)

SUMMARY

Frontend engineer, **almost 5 years** on React / Next.js and Vue / Nuxt with strict TypeScript — I build product frontends from zero and own them in production.
Founding frontend engineer at an EdTech product: Turborepo monorepo, typed API layer and a Storybook library from Figma for three apps — **over 50% less duplicated code**, **−60% UI CPU** on 1 000+ row CRM lists. Now I own a live German e-commerce shop on **Nuxt 4** — **243 of 256 commits**, cookie auth with rotating refresh tokens, the Nuxt 3 → 4 upgrade behind tests written first. Most recently: **KYC / KYB onboarding on Angular 20–21** for a fintech e-money platform.
I write architectural decisions down as standards and hold them in code review.

TECHNICAL SKILLS

React	**React 18**, Hooks, Suspense, **Next.js** (App Router, SSR / SSG), **TanStack Query**, Zustand, Redux Toolkit, React Testing Library
Vue & Nuxt	**Vue 3** Composition API, **Nuxt 3 & 4** (SSR / SSG, Nitro server routes, middleware), **Pinia**, Vue Router, Vue 2 / Vuex legacy, Vuetify, Quasar
Angular	**Angular 20–21**, Signals, RxJS, Reactive Forms, Angular Material — multi-step KYC / KYB forms in production
TypeScript	**Strict mode** — generics, discriminated unions, mapped types, typed API contracts; led a full JavaScript → TypeScript migration
Architecture	**Monorepos** (Turborepo, Nx), typed API client layer over OpenAPI / REST, design tokens → Storybook, feature-based structure, written standards and code review
Security	**Rotating refresh tokens** with single-flight refresh and reuse detection, route guards, OAuth, JWT, **2FA UI** (authenticator, SMS, passkeys), CORS / CSRF / SameSite, security headers (nuxt-security, helmet), rate limiting, CSP / XSS unit tests, dependency audit 21 → 3
Forms	Multi-step forms with conditional fields, cross-field validation, file uploads, zod, Reactive Forms
Testing	**Vitest** with coverage and msw, **Playwright** E2E with axe-core, Karma / Jasmine, Jest, Cypress
Tooling	Vite, Webpack, ESLint & Prettier, Husky, lint-staged, commitlint, GitHub Actions & GitLab CI, Docker
Also	Node.js (Express, Nitro), REST, GraphQL, WebSockets, Tailwind CSS, SCSS, i18n, Ionic & Capacitor

EXPERIENCE

ORAP GmbH — Frontend Developer Apr 2026 — Present · Remote

*Two live storefronts of a German auto parts e-commerce group — **orap.de** and **handlerparts.com** — multi-locale, SSR.*

- Own orap.de's frontend almost end to end — **243 of 256 commits, 228 components**: catalogue, cart, bulk article search, customer dashboard, PayPal checkout, in several languages; **Lighthouse performance 95** on desktop.
- Built the **auth layer**: email confirmation, password recovery, route guards, cookie-stored tokens with a **rotating refresh token** — concurrent near-expiry requests coalesced into a single refresh.
- Led the **Nuxt 3 → 4 upgrade on the live shop**: tests first for the stores and tables a major breaks, then fixed a dependency mismatch that had silently dropped every meta tag, with a regression test for it.
- **Dependency audit: 21 → 3** accepted advisories; security headers via nuxt-security; **190 unit tests** on Vitest with msw and **Playwright + axe-core** in CI, conventional commits.

Stack: Nuxt 3 & 4, Vue 3, TypeScript, Pinia, Tailwind CSS, zod, Vitest, msw, Playwright, axe-core, PayPal SDK, nuxt-security

ICGS — Frontend Developer (Angular) Apr 2026 — Oct 2026 · Remote

*B2B e-money and payments platform (fintech, EMI): client onboarding, user profile and public investment pages on **Angular***

20–21.

- Built the **KYC / KYB onboarding** for companies and individuals — two Angular apps with multi-step forms: directors, UBOs / shareholders, documents and compliance declarations, conditional fields, cross-field validation (age, ownership 1–100%, Latin-only input), file uploads and a generated PDF of the application; **569 unit tests** (Karma / Jasmine) on the KYB app.
- Review cycle with the back office: field-level approve / reject, rejected fields highlighted and approved ones locked for the client, resume at the last step after reload, stale values from an older form version flagged and blocking the final submit.
- User profile app: single-page redesign to the company design system, **2-Step Verification** (authenticator, SMS, passkeys), Google / Apple account linking, confirmation codes for sensitive actions, session-expiry warning and proactive token refresh; Angular signals, unit tests on Vitest.

Stack: Angular 20–21, TypeScript, RxJS, Signals, Angular Material, Tailwind CSS 4, Karma / Jasmine, Vitest
Reference: letter from the Managing Director available on request

Gelios — Founding Frontend Engineer

Jan 2025 — Apr 2026 · Remote

New EdTech product built from zero: student portal, teacher portal and an internal CRM.

- **Over 50% less duplicated code** across three applications — laid the client side from scratch: Turborepo monorepo, shared data layer with typed API clients, design tokens and a Storybook component library from Figma.
- **−60% UI CPU** on 1 000+ row CRM lists — virtualisation, React Query caching, debounced inputs; the CRM itself: server-side **filtering**, sorting and pagination, bulk actions, **multi-step edit forms** with conditional fields.
- REST and GraphQL integrations with consistent loading / error / empty states; a WebSocket layer for real-time chat and notifications; critical flows covered with Cypress.

Stack: React, Next.js, TypeScript, Turborepo, TanStack Query, Zustand, REST, GraphQL, WebSockets, Storybook, Cypress, GitHub Actions

Onix-Systems — Frontend Engineer

Dec 2022 — Jan 2025

Outsourcing: long-running client products on React / Next.js and Vue / Nuxt.

- **−40% legacy code, +25% team velocity** — led a phased Vue 2 → Vue 3 migration; **−30% runtime errors** — a full JavaScript → TypeScript migration on live products; wrote the coding standards the team followed.
- **35% faster initial load** — architected an SSR platform on Nuxt from scratch; built product configuration and checkout flows on React / Next.js and Vue with backend-driven validation.
- Live work: Onix Works — the company's showcase of 331 projects on Nuxt SSR with filters and search, built from scratch; Clubhouse — online fitness and coaching platform for a US client (Vue, Stripe, i18n, Socket.io).
- Shipped a **cross-platform mobile app** (Ionic + Capacitor) from the existing component library — iOS and Android from one codebase, ~400 developer hours saved.

Stack: React, Next.js, Redux, TypeScript, Vue 3, Nuxt, Pinia, React Query, Tailwind CSS, Ionic, Capacitor, Jest

Egolist — Frontend Developer

Jan 2022 — Dec 2022

- High-traffic marketplace: listings and seller dashboard on Vue 2; a **WebSocket layer for 10 000+ concurrent connections** (chat, notifications); the GitLab CI/CD pipeline behind one-click releases.

Own projects

2026

- **Kaufo** — full-stack C2C marketplace with **escrow** payments, TypeScript end to end: Vue 3 + Pinia frontend on Figma design tokens with a dark theme and 6 languages; NestJS + Prisma + PostgreSQL backend with an escrow-provider abstraction, real-time chat and price offers over WebSockets (Redis pub/sub across instances), passwordless login with **refresh-token rotation and reuse detection**, rate limiting, S3 photo storage, GDPR export / delete; Playwright e2e in CI.
- **Scout** — Manifest V3 extension for FACEIT in the Chrome Web Store, built solo from idea to release: UI embedded into a third-party SPA that survives its re-renders, the site's API under a ~30 req/min limit (**429 + Retry-After**) with caching, a service worker that accepts messages only from its own contexts, **100+ unit tests** incl. CSP / XSS checks, 9 UI languages, a small backend on Vercel + Redis.

EDUCATION

M.Sc. in Computer Science — Oles Honchar Dnipro National University, Dnipro, Ukraine · 2024 — 2025

LANGUAGES

Ukrainian — native | Russian — fluent | English — B1 (technical documentation, written communication)
